                                                                                                                                                                                                                                                                                                                                                                                                                                the secretory pathway.";
J. Biol. Chem. 266:10739-10742(1991).

-!- FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.
-!- SUBCELLUTAR LOCATION: EMDOPLASSING RETICULUM LUNEN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
PEPTIDYL-PROLYL CIS-TRANS ISOMBRASE B PRECURSOR (EC 5.2.1.8) (PPIASE) (FOTAMASE) (CYCLOPHILIN B) (S-CYCLOPHILIN) (SCYLP). Gallus gallus (Chicken). Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Archosauria; Aves; Neognathae; Galliformes; Phasianidae; Phasianinae;

-!- CHALYTIC ACTIVITY; CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- ENZYME REGULATION: BINDS CYCLOSPORIN A (CSA). CSA MEDIATES SOME OF ITS EFFECTS VIA AN INHIBITORY ACTION ON PPIASE.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC.
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.

-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROTEINS.

-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPHIDES.

-!- ENZYME REGULATION: BINDS CYCLOSPORIN A (CSA). CSA MEDIATES SOME OF TTS EFFECTS VIA AN IMHIBITORY ACTION ON PPIASE.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC.

-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.

-!- CAUTION: REF.3 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Nematoda; Chromadorea; Rhabditida; Rhabditoidea;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lyne M., Rajandream M.A., Barrell B.G., Rieger M.;
Submitted (OCT-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.

Sequence of cyclophilin (cyppfl) gene of Plasmodium falciparum
(isolate FCCI/HN) ";
Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PEPTIDYL-PROLYC IGS-TRANS ISOMERASES ACCELERATE THE
FOLDING OF PROTEINS (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC
PEPTIDE BOUNDS IN OLIGOPEPTIDES.
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PEPTIDYL-PROLYL CIS-
TRANS_ISOMERASE_FAMILY.

- FUNCTION: PDIASES ACCELERATE THE FOLDING OF PROTEINS.

- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOREPTIDES.

- ENZYME REGULATION: INHIBITED BY CYCLOSPORIN A (CSA).

- INGHEST LEVEL OF EXPRESSION IN ALL ENTYHROCYTIC STAGES, BUT HIGHEST LEVEL OF EXPRESSION IN THE LATE-RING STAGE.
Reddy G.R.; "Cloning and characterization of a Plasmodium falciparum cyclophilin gene that is stage-specifically expressed."; Mol. Blochem. Parasitol. 73:111-122(1995).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

AAY69925 standard; peptide; 11 AA. 11-APR-2000 (first entry) AAY69925; RESULT AAY69925 

Human cyclophilin B peptide fragment #5.

Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.

Homo sapiens.

W09967288-A1.

29-DEC-1999.

99WO-JP03360. 24-JUN-1999; 98JP-0178449. 25-JUN-1998;

(SUMU ) SUMITOMO PHARM CO LID. (ITOH/) ITOH K.

Gomi S; Itoh K,

WPI; 2000-116932/10.

Tumour antigen peptides derived from cyclophilin B for treatment and diagnosis of tumours

Claim 4; Page 50; 64pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or poly4' RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and
        This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours.
                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

The invention relates to a composition for modulating somatolactogenic function, comprising cyclophilin B (Cyple), a mutant of cyclophilin B by particularly a Cyple mutant in which residues 2-12 of the mature protein are absent) or an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone (e.g., prolactin, growth hormone). The invention also relates to a method of identifying inhibitors of somatolactogenic functions using CypB and a somatolactogenic hormone, and a method for diagnosing diseases associated with abnormal somatolactogenic functions by assessing CypB levels in a sample from a patient. Cyclophilin B is useful for augmenting somatolactogenic functions in the animal, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cyclophilin 8 mutant or a composition comprising an inhibitor of the interaction of cyclophilin 8 with a sometolactogenic hormone, is useful for inhibiting sometolactogenic function in the animal. A composition comprising cyclophilin B is useful in the treatment of immunosuppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in the treatment of short stature, muscle wasting and osteoporosis. A composition comprising cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful for treating HIV infection, breast and prostate cancer, gigantism/aeromegaly, and hyperprolactinemia. The present sequence represents a human cyclophilin B C-terminal mutant, CypB-AIAKE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin B with somatolactogenic hormone .
                                                                                                                                                                                                                                                                                                                                                                                                                        Human cyclophilin B; CypB; prolactin-binding; growth hormone-binding; somatolactogenic function modulator; immunosuppression; short stature; muscle wasting; osteoporosis; HIV infection; breast cancer; prostate cancer; glantism; acromegaly; hyperprolactinaemia; C-terminal deletion mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                      Human cyclophilin B (CypB) C-terminal deletion mutant, CypB-AlAKE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The present sequence is not shown in the specification, but is derived from the wild-type CypB sequence shown on pages 17-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 211;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition for modulating somatolactogenic function, comprising eyolophilin B (CypB), a mutant of cyclophilin B (particularly a CypB mutant in which residues 2-12 of the mature protein are absent) or an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone (e.g., prolactin, growth hormone). The invention functions using CypB and a somatolactogenic incomposition in the interaction of somatolactogenic diagnosing diseases associated with abnormal somatolactogenic functions by assessing CypB levels in a sample from a patient. Cyclophilin B is unseful for augmenting somatolactogenic functions in the animal, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cyclophilm B mutant or a composition comprising an inhibitor of the interaction of cyclophilm B with a somatolactogenic hormone, is useful for inhibiting somatolactogenic function in the animal. A composition comprising cyclophilm B is useful in the treatment of immunosuppression, in the treatment of short stature, muscle wasting and osteoporosis. Composition comprising cyclophilm B mutant or a composition comprising an inhibitor of the interaction of cyclophilm B with a somatolactogenic hormone, is useful for treating HV infection, breast and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin
                                                                                                                                                                                                                                                                                                                    Human cyclophilin B: CypB; prolactin-binding; growth hormone-binding; sometolactogenic function modulator; Immunosuppression; short stature; muscle wasting; osteoporosis; HIV infection; breast cancer; prostate cancer; gigantism; acromegaly; hyperprolactinaemia.

The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, antibodies, antibodies, agonits and antagonists from the present invention may be used to treat immune disorders by activating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nuclocides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities
                                                                                                                                                                                                                                                                                   dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoletic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ωp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A third mammalian cyclophilin, cyp C, was isolated from a CDNA ibrary prepd. from the murine bone marrow derived stronal cell line AC 6. This CDNA was isolated from a substracted sub-library contg. cenes induced by treatment of the stronal cell line with interleuking (IL-1). The message levels for cyp C show a 2-3 fold induction by treatment with IL-1, and this CDNA exhibits a high level of homology with known cyclophilins. Cyp C is distinct from mammalian cyclophilins. Cyp C is distinct from mammalian cyclophilins. Cyp C is distinct from mammalian cyclophilins A and B in both sequence and tissue distribution of expression. A fusion protein contg., e.g. maino acids 16-212 of cyp C possesses peptidyl-prolyl isomerase (PPIase) activity which can be completely inhibited by addition of cyclosporin A (CSA). These cyp C fusion protein of cyclosporin A (CSA). These cyp C intracellular proteins which together form high affinity associations. For example, the cyp C fusion protein binds to a protein of 77 kD in the absence of CSA, while in the presence fo CSA it no longer binds to this p77, but instead binds specifically to a protein of 55 kD, identified as calcineurin (U.S.S.N.07/740175).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour antigen peptides derived from cyclophilin B for treatment and

Peptidylprolyl isomerase (EC 5.2.1.8) ROC2 - Arabidopsis thailana
N'Alternate names: cytosolic cyclophilin; peptidyl-prolyl cis-trans isomerase; protei
C;Species: Arabidopsis thailana (mouse-ear cress)
C;Date: 20-Apr-2000 *sequence_revision 20-Apr-2000 *text_change 21-Jul-2000
C;Accession: T47724; S71220
R;Benes, V.; Wurmbach, E.; Drzonek, H.; Ansorge, W.; Mewes, H.W.; Rudd, S.; Lemcke, K. A;Reference number: 224474
A;Reference number: 224474
A;Status: preliminary
A;Notcession: T47724
A;Status: preliminary

"The characterization of a cyclophilin-type peptidyl prolyl
cis-trans-isomerase from the endoplasmic-reticulum lumen.";
Blochem. J. 300:871-875(1994).
-ir FUNCTION: PPIASES ACCEREATE THE FOLDING OF PROTEINS.
-ir CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC
PEPTIDE BONDS IN OLIGOPEPTIDES.
-ir SUBGRIGATION: CYCLOSPORTNA A (CSA) INHIBITS CYPB.
-ir SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-ir SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-ir SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PEPTIDYL-PROLYL CIS-TRANS ISOMERASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cyclosporin; Isomerase; Rotamase; Signal; Endoplasmic reticulum;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Carrello A., Mark P.J., House A.K., Ratajczak T.;

CYCLOPALIA and List expression in Bscherichia coli.";
MOL. Biochem. Parasitol. 75:99-111(1995).

-1. FUNCTION: PPIASES ACELERARE THE FOLDING OF PROTEINS.

-1. CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC
PETIDE BONDS IN OLIGOPETIDES.

-1. ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.

-1. DEVELOURMENTAL STRAGE: THIS SOLUBLE PROTEIN IS PRESENT IN ABUNDANCE
IN THE ADULT WORM AS WELL AS IN THE SCHISTOSOMULA AND THE EGGS.

-1. SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FMAILY.
